Enterprise Risk Management

Our Enterprise Risk Management (ERM) solution is an add-on module that integrates into the existing XGRC solution stack to provide an enterprise-wide risk assessment. It is not available independent of a management solution but can allow an organisation to manage risk and opportunities related to the achievement of its objectives.

Why our **ERM Solution** is good for business

Identify risks	Analyse/ quantify risks	Assess/ prioritise risks	Monitor and review

ERM x Establishing Organisational Context

- Strategy
- Objectives
- Targets
- Asset identification
