

Performance Indicator Management

Our Performance Indicator Management Tool (PIX) allows organisations to create custom performance indicators that provide insight into performance across disciplines. The organisation can decide on the disciplines that they wish to measure and use PIX to create these indicators accordingly. The unique construct of PIX allows information to be integrated from numerous other sources outside of your XGRC Software Solution Stack.

Why our PIX Solution is good for business

- Create custom performance indicators
- Integrate into existing XGRC solution stack
- Integrate into various other platforms
